**DRAGONFLIES & DAMSELFLIES OF COLUMBIA COUNTY**

**DESCRIPTION:** This is a large dragonfly, with a blue and black pattern on its abdomen and two green stripes on its thorax. It is commonly found around stagnant ponds, and can be seen flying over fields or along the shores of slow-moving rivers.

**BEHAVIOUR/ABUNDANCE:** We have only seen a few specimens of this species. It is often seen flying near the shore of slow-moving rivers, particularly in the springtime. It is known for its distinctive blue and black coloration, which makes it easily recognizable.

**Habitat:** From the edges of ponds, forested swamps, and other stationary water. It can be found near slow-moving rivers and along the shores of fields.

**Endangered:** This species is considered endangered in New York. It can be found around stagnant water, along the shores of slow-moving rivers, and near fields.

---

**DESCRIPTION:** This small, slender bluet is distinctive for its blue body with bright blue tips. It is commonly found around stagnant ponds, and can be seen flying over fields or along the shores of slow-moving rivers.

**BEHAVIOUR/ABUNDANCE:** We have seen quite a few specimens of this species. It is often seen flying near the shore of slow-moving rivers, particularly in the springtime. It is known for its distinctive blue and black coloration, which makes it easily recognizable.

**Habitat:** From the edges of ponds, forested swamps, and other stationary water. It can be found near slow-moving rivers and along the shores of fields.

**Endangered:** This species is considered endangered in New York. It can be found around stagnant water, along the shores of slow-moving rivers, and near fields.

---

**DESCRIPTION:** This tiny damselfly is easily distinguished by its black thorax with bright blue tips. It is commonly found around stagnant ponds, and can be seen flying over fields or along the shores of slow-moving rivers.

**BEHAVIOUR/ABUNDANCE:** We have only seen a few specimens of this species. It is often seen flying near the shore of slow-moving rivers, particularly in the springtime. It is known for its distinctive blue and black coloration, which makes it easily recognizable.

DRAGONFLIES & DAMSELFLIES OF COLUMBIA COUNTY

Water-boatman (Hemiptera: Notonectidae)
DESCRIPTION: This is a very large, dark, broad-beamed dragonfly with a stocky body and a distinctive, flattened head. It is often found near water bodies and can be observed flying or resting on the surface.

Dusky Clubtail (Gomphus spicatus)
DESCRIPTION: This is a medium-sized dragonfly with a dark, sleek body and a distinctively broad wing base. It is commonly found in wetlands and can often be seen perching on vegetation or patrolling along the edge of ponds.

Black Darter (Sympetrum semicinctum)
DESCRIPTION: This is a relatively small dragonfly with a dark, sleek body and long, slender wings. It is typically found in slow-flowing streams and can be distinguished by its distinctive coloration.

American Emerald (Cordulia aurata)
DESCRIPTION: This is a medium-sized dragonfly with a bright green body and black wings. It is often found in wetlands and can be distinguished by its vibrant coloration.

Common Racer (Hydrothemis sanguinea)
DESCRIPTION: This is a medium-sized dragonfly with a bluish-green body and black wings. It is typically found in wetlands and can be distinguished by its striking coloration.

Twin-spotted Spiketail (Gomphus bimaculatus)
DESCRIPTION: This is a medium-sized dragonfly with a distinctive black body and green wings. It is typically found in wetlands and can be distinguished by its unique coloration.

Yellow-legged Meadowhawk (Sympetrum vicinum)
DESCRIPTION: This is a medium-sized dragonfly with a bright yellow body and black wings. It is typically found in wetlands and can be distinguished by its vibrant coloration.

Ruby Meadowhawk (Sympetrum rubicundulum)
DESCRIPTION: This is a medium-sized dragonfly with a bright red body and black wings. It is typically found in wetlands and can be distinguished by its striking coloration.

Yellow-striped Darner (Gomphus flavipes)
DESCRIPTION: This is a medium-sized dragonfly with a yellow-striped body and black wings. It is typically found in wetlands and can be distinguished by its unique coloration.

White-faced Darner (Gomphus rhombifer)
DESCRIPTION: This is a typical large dragonfly with a white face and black wings. It is typically found in wetlands and can be distinguished by its distinctive coloration.

Water Skimmer (Libellula aurora)
DESCRIPTION: This is a medium-sized dragonfly with a transparent body and black wings. It is typically found in wetlands and can be distinguished by its delicate appearance.

Northern Pondhawk (Eschmeyera perditio)
DESCRIPTION: This is a medium-sized dragonfly with a blue-green body and black wings. It is typically found in wetlands and can be distinguished by its vibrant coloration.

Stilt-legged Darner (Gomphus spicatus)
DESCRIPTION: This is a small dragonfly with a distinctive bluish-green body and black wings. It is typically found in wetlands and can be distinguished by its unique coloration.

Rusty Snaketail (Ophiogomphus carolinus)
DESCRIPTION: This is a medium-sized dragonfly with a rusty-red body and black wings. It is typically found in wetlands and can be distinguished by its distinctive coloration.

Eastern Pondhawk (Erythemis vesiculosa)
DESCRIPTION: This is a medium-sized dragonfly with a bright green body and black wings. It is typically found in wetlands and can be distinguished by its vibrant coloration.

Cherry-faced Darner (Gomphus florentinus)
DESCRIPTION: This is a medium-sized dragonfly with a cherry-red body and black wings. It is typically found in wetlands and can be distinguished by its distinctive coloration.
